PROTEXT

ProText is Regenerative Labs most concentrated Wharton's jelly connective tissue supplement.

Regenerative Labs Wharton's jelly allografts are regulated under section 361 of the Public Health Service Act (PHS) and 21 CFR Part 1271. ProText is processed to preserve the structural integrity and original relevant characteristics of Wharton's jelly as observed in the donor and is intended for homologous use only. Regenerative Labs' products are ethically derived and do not contain any material obtained from an embryo or fetus. Regenerative Labs birth tissue allografts are derived from healthy, consenting mothers after full-term, live, planned, Cesarean section (C-section) deliveries.

How It Is Applied

ProText is a structural connective tissue allograft intended for homologous use to replace or supplement missing or damaged tissue directly at the site of a structural defect. Wharton's jelly is processed to preserve the structural integrity and original characteristics of the connective tissue relating to its utility to supplement missing or damaged tissue in the recipient.

Advantages Of Wharton's Jelly

This connective tissue contains high amounts of extracellular matrix components including collagen types I, III, and V, elastin, and fibronectin that provide a natural scaffold to facilitate cellular adhesion^{1,2}. Wharton's jelly primarily provides cushioning and structural support to the umbilical cord but also contains a natural source of long-chain hyaluronic acid as well as numerous cytokines and growth factors. Studies have described placental tissues to be "immune privileged" as they rarely evoke an immune response in the body, reducing the risk of adverse reaction⁴.

PRODUCT	SKU	DOSE
ProText	PT100-25	1ml
Q-Code: Q4246	PT200-25	2ml

What Is A Structural Defect?

A defect is defined as missing or damaged tissue in the body. Missing or damaged tissue often compromises the stability and structural integrity of its surrounding area. If you may be dealing with a structural defect, ask your physician if you could benefit from connective tissue supplementation.

Supplementing A Defect

ProText is a Wharton's jelly structural connective tissue allograft that provides cushioning and structural support to the site of a defect. Wharton's jelly is processed to preserve the structural integrity and original characteristics of the connective tissue relating to its utility to supplement missing or damaged tissue in the recipient. If you may be dealing with a structural defect, ask your physician if you could benefit from connective tissue supplementation.
